

# PMO CTSB

## Project & Delivery Management System

Satu platform untuk portfolio projek, penghantaran kerja, helpdesk, kewangan milestone, dan kapasiti pasukan — direka untuk persekitaran kerajaan / PBT.

# Why this system?

- **One place** for projects, tasks, issues, backlog, and billing milestones
- **Government-ready** — engagement types (Contract, LO, PO), delivery scopes, phase templates
- **Traceable flow** — Helpdesk → Backlog → Task → Delivery phase → Finance
- **Role-based** — PMO, Finance, Admin, and team members see what they need
- **Notifications** — in-app bell + email when SMTP is configured

*Matlamat: kurangkan spreadsheet berasingan dan pastikan status projek sentiasa boleh diaudit.*

# User roles

**Admin**  
Users, settings, full access

**PMO**  
Create projects, phases, backlog, assign work

**Finance**  
Payment pipeline, mark invoiced/paid, renewals

**Team**  
My work, tasks, helpdesk, calendar

| DEMO ACCOUNT           | PASSWORD   | USE FOR               |
|------------------------|------------|-----------------------|
| pmo@pmo.local          | pmo123     | PMO walkthrough       |
| finance@pmo.local      | finance123 | Finance module        |
| ahmadrizal@company.com | user123    | Team member / My work |

# Main menu modules

## Portfolio & delivery

- Command Center (Dashboard)
- Projects
- Helpdesk
- My work
- Gantt timeline

## Operations & admin

- Finance (Finance role)
- Reports & exports
- Clients
- Calendar & activities
- Team & capacity
- Users & History (Admin)

Setiap modul menggunakan UI/UX yang sama: KPI cards, filters, tables, empty states.

# Dashboard

- Portfolio health — on track, at risk, blocked projects
- Active projects, overdue tasks, team overload indicators
- Helpdesk & backlog KPIs at a glance
- Quick links into Projects and Helpdesk

Pusat kawalan untuk PMO — lihat kesihatan portfolio tanpa buka satu-satu projek.

# Project portfolio

- **Engagement type** — Contract, Letter of Offer (LO), PO, MOU, Tender, etc.
- Grid or list view with health badges, progress, overdue counts
- Filter by status, health, engagement type; search by name/client
- Link multiple client companies per project
- Create project wizard — schedule, clients, engagement

Jenis kontrak (Kontrak/LO) di peringkat projek — bukan jenis kerja (dev/API).

# Work packages

- One project can contain **multiple delivery lines**
- Each package has its own **delivery scope** — e.g. Portal dev, API integration, Data migration
- Own phases, tasks, backlog, and finance totals per package
- Ideal for mixed engagements under a single contract

Contoh: Projek Portal PBT dengan 3 work package — portal, payment API, data import.

# Inside each project

## Tabs

Overview — health, timeline, team snapshot

Work packages

Backlog

Tasks (groups & subtasks)

Delivery & payment phases

Timeline

People & allocation %

## Deep links

Open directly to a tab, e.g.:

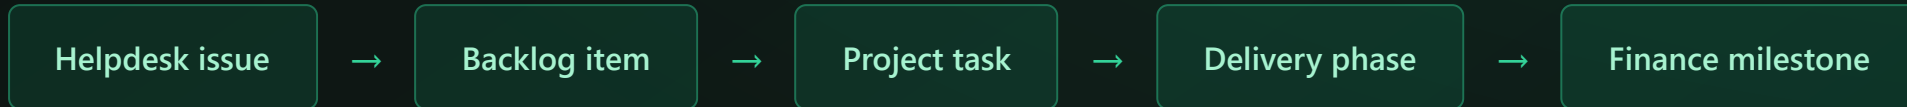

</projects/1?tab=tasks>

Notifications link straight to the relevant tab.

# Helpdesk

- Log issues — priority, category, client, project, assignee
- Statuses: Open, In progress, Waiting on client, Resolved, Closed
- Filter all issues or **My issues**
- Click issue title for detail; assign from table
- **Promote to backlog** — converts issue into scoped backlog item
- Assignee gets in-app notification (+ email if configured)

# Helpdesk → Backlog → Task

- Backlog types: scope, CR, bug, enhancement, support, data, recurring
- Tasks support groups, subtasks, assignees, progress %, dates
- Filter tasks/backlog by work package when project is multi-scope

## Phases & milestones

- Phase templates by delivery scope — URS, UAT, Go-live, Maintenance, etc.
- Per phase: status, progress %, target date, payment amount
- Payment status: Pending → Invoiced → Paid
- Initialize template per project or per work package
- Finance sees completed phases ready to bill

Setiap fasa boleh ada nilai tuntutan — Finance track claim ikut milestone.

# Delivery & payment

- **Ready to bill** — completed phases, pending payment
- **Invoiced** — awaiting client payment; mark paid when received
- **Paid & claimed** — audit trail per phase (invoice no., paid date)
- **Maintenance renewals** — expired / ending-soon contracts for follow-up
- Portfolio & work-package collection %; export CSV

# My work

- Single queue: tasks, backlog, helpdesk assigned to you
- KPIs: overdue, due this week, critical/high priority
- **Needs attention** strip for urgent items
- Mark task done inline; open project or issue directly
- **Schedule** tab — today's calendar activities

Untuk developer/support — semua kerja assigned dalam satu skrin.

# Team, calendar & Gantt

## Team & capacity

People directory (name, email, role)

Project assignments + allocation %

Workload view — overload warnings

Check availability before new assignment

## Calendar & Gantt

Log meetings, UAT, training, go-live, outstation

Import/export activity reports

Gantt — visual timeline of project tasks

Manage tasks in project workspace

# Reports, clients & notifications

- **Reports** — health charts, progress, resource utilization, CSV export
- **Clients** — companies + PIC contacts; link to projects
- **Notifications** — bell icon; task/issue assignments; deep links
- **History** (Admin) — audit log of key actions
- Dark mode toggle for comfortable viewing

# How to use (team)

| IF YOU ARE...  | START HERE                                                                 |
|----------------|----------------------------------------------------------------------------|
| PMO officer    | Projects → create/open project → Work packages → Backlog → Delivery phases |
| Developer / BA | My work → tasks & backlog; update progress in project Tasks tab            |
| Support        | Helpdesk → report/resolve issues; check My work                            |
| Finance        | Finance menu → ready to bill → mark invoiced/paid; renewal follow-up       |
| Manager        | Command Center + Reports → portfolio health                                |

Local demo: `npm run seed:demo` then login with accounts above.

THANK YOU

# Questions?

PMO CTSB — satu platform untuk penghantaran projek yang telus, boleh diukur, dan sedia untuk audit kewangan mengikut fasa.
